Art Unit: 2881

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15 and 28-29, drawn to a time of flight mass spectrometer, classified in class 250, subclass 287.
- II. Claims 16-23, drawn to a method for processing transient data of a time of flight mass spectrometer, classified in class 250, subclass 282.
- III. Claims 24-27 and 30, drawn to a method for determining, time of arrival, a plurality of ions arriving at a surface of a detector, classified in class 250, subclass 283.

The inventions are distinct, each from the other because:

Inventions I, II and III are distinct, each of the inventions I, II and III recites the limitations not recited in the other invention. The differing limitations make the invention I, II and III patentably distinct from one another, i.e., a reference that anticipates or makes obvious one of the inventions I, II and III would not by itself anticipate or make obvious the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Eric B. Hall on 09-27-2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2881

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
